HARDI HANDHELD SPRAYERS

HARDI P1.5, P6 and P8 handheld pressure sprayers are perfect for professional and residential plant care in small areas. They are easy to use, sturdy and built to last. Available in 3 compact sizes - **1.5, 6 or 8 litres**. Our handhelds are produced in Europe to ensure the highest quality.

All components are chosen with a long life-span in mind. The Viton seals are highly resistant to commonly used organic solvents, making them popular in other industries as well, such as the vehicle repair and the construction industries.

Your safety is always a top priority. Over-pressurising is not possible, and all tank openings are placed at the top to avoid leakages from the bottom.

HARDI BP15 AND BP20

HARDI BP15 and BP20 backpack sprayers are tough and built to last. All components are chosen with a long life-span in mind, from the sturdy polypropylene tank to the Viton seals suitable for demanding chemical solutions. These sprayers are provided with two different nozzles for application of all types of plant protection products at a pressure of up to 3 bar.

The tank is not pressurised. Spraying is controlled from the trigger valve.

Our backpacks are designed with safety and comfort in mind. All tank openings are placed at the top to avoid leakages. The leak-proof design with a hand-operated piston pump makes the sprayers easy to clean and maintain without special tools. With an ergonomic design, shoulder pads and waist belt these sprayers are also comfortable to wear.

HOZELOCK ELECTRIC SPRAYER

Get a constant spray at the touch of a button with the **Hozelock Electric Sprayer**. No pumping required. This **new** 15L knapsack sprayer has an 18v lithium-ion battery that provides enough power to spray for up to 4 hours, dependant on the pressure used. There are three levels of pressure to suit all applications. 1 bar, 3 bar and one position for high flow.

HOZELOCK ELECTRIC SPRAYER
CURRENT PRICE **KSH 37,275 + VAT**

HARDI BPM 100 MISTBLOWER

The **BPM 100** is a **16 litre** back pack mistblower used for low volume application of pesticides over large areas where there might be limited access or where canopy penetration is required.

A motorised centrifugal fan produces high air speed through a venturi air outlet which shears the spray liquid into a fine mist. The mist is carried to the target in the air stream which is directed by the operator.

The spraying range for the BPM100 Mistblower is 15m horizontally or 12m vertically.

A needle valve provides flow rate control and multi-function controls handle stop start, fan speed and fluid flow rate.

COOPER PEGLER CP15 AND CP3

Robust and durable thanks to their unique diaphragm pump system combined with the pressure control valve, the Cooper Pegler knapsacks are the ideal portable sprayer for your crop protection.

The diaphragm pump system of the CP3 Classic and CP15 Evolution creates the pressure through the deformation of a highly flexible diaphragm, the limited friction action of this diaphragm avoids premature wear to the pump due to dirty water.

The decades-old reputation on the CP knapsacks is built around their high build quality and durable components. The sprayers are fitted with an easy-to-use pressure control valve with high and low settings, Kevlar lances and comes with a cone and Anvil nozzle for different application
