## Hardi 400/600 litre Hockey Stick Boom Coffee Sprayer

*Using Hardi's well known NK 400/600 tank and frame, and adapted to suit the requirements of Kenya's coffee farmers, the Hardi NK400/600 Coffee sprayer is ideal for those farmers who do not require a trailed unit, or whose land is too steep to be able to use a trailed unit.*

The sprayer frame is heavy duty C-section specially reinforced to cope with the rigours of coffee spraying. The 400 or 600 litre tank is made from blow- moulded HDPE, which is strong and easy to repair. The sprayer can be fitted with a number of pump types available from Hardi Kenya. The Comet IDS1000 diaphragm pump, with its brass cylinder heads is known for its reliability and resistance to the corrosive effect of copper-based fungicides.

Producing 100l/min at 50bar maximum pressure, it is ideal for the high volume application required for this form of spraying technique. Other high pressure pumps available are the AR1064 and the Comet APS61.

The two Hockey Stick Booms are fitted with V9/V10 brass fan jets with anti-drip valves.

The Sprayer comes with a Bondioli & Pavesi size 104 PTO shaft.
